Posted June 2009. This vacancy remains open until a successful applicant is appointed.

The enthusiastic and dedicated team at Apex Acoustics make us the leading acoustic consultancy in the North East of England, and even in these challenging times we are successfully extending our customer base.

We advise in all areas of acoustics, noise and vibration. We have a prestigious portfolio of diverse projects including education, healthcare, office, residential, retail, leisure and industrial developments.

You will have experience in taking the lead role with architects and contractors, with a proven track record. Specialism in either building acoustics or environmental acoustics is welcome, although an ability to consult across many areas of noise and vibration will be an advantage. You will have a good rapport with clients and the design team, with clear and concise communication skills. A minimum of five years consultancy experience is anticipated, although more would be an advantage.

The ability and aspiration to develop the business in your preferred field would be welcome. The training and development of others would be expected, with knowledge of Cadna/A, CATT, and Bastian software advantageous. You will be a member of the Institute of Acoustics with a full driving licence.

This role offers a competitive, negotiable salary and the opportunity to work in a lively flexible organisation without unnecessary bureaucracy. We enjoy developing practical solutions to acoustic problems and curvy at least once a week.
